Team

I have revised the parameters table formerly known as "BBA_Table_4_3_Parameter_Values_121129_Team.xlsx" and conducted an internal and external consistency check. Attached please find the new Mine Parameters Table that we should all be using for our primary data source for areas and volumes related to the mine scenarios. A couple of points about the revisions:

All previous highlighting and colored fonts have been removed to assist in identifying the new values. Green values were checked and verified, green references have been updated. Rose highlighted cells in the Raw Data indicate a change in value (note that some were only minor rounding, but some changed more significantly).

I revised the column headings to include the new size nomenclature (Pebble 0.25, 2.0 and 6.5), but left the BBA designation in so I didn't have to change all the references.

Many values are based on the most recent GIS analysis which is summarized in "Scale3_DrainageAreaImpacts_010413.xlsx"

If you see anything that does not look correct or have questions about any of the values in the table please contact me or Ralph. Please distribute to other members of the team who may need this info.

We may want to post this on the Quickr site for all to reference.

Thanks.

Please note NEW Address, phone and email!
